OVERVIEW OF CONFERENCE

The body is made up of trillions of living cells. Normal body cells grow, divide, and die in an orderly way. During the early years of a person's life, normal cells divide faster to allow the person to grow. After the person becomes an adult, most cells divide only to replace worn-out, damaged, or dying cells. Cancer begins when cells in a part of the body start to grow out of control. There are many kinds of cancer, but they all start because of this out-of-control growth of abnormal cells. Cancers can occur any part of the female reproductive system-The vulva, vagina,cervix, uterus, fallopian Tubes or ovaries. These cancers are called reproductive malignancy (gynecological cancers).More than 70,000 new cases of cervical uteri, 3-8 % of corpus uteri, 1-3% of vulvar and gestational trophoblastic tumors, and over 75,000 of breast cancers are reported in India every year.

OBJECTIVES OF CONFERENCE

At the end of the State Conference the participants will be able to

1. Review of Cancer with reproductive malignancy
2. Explain current treatment modalities of Breast cancer
3. Describe current treatment modalities of Genital Cancer
4. Determine the Role of Nurse in palliative Care
5. Demonstration of Breast Self Examination and Pap smear.
