ON
EARLY NEONATE: INDICATORS OF
SURVIVAL.

JOIN NOW

FRIDAY, 27th October 2023

OVERVIEW OF CONFERENCE

Most neonatal deaths (75%) occur during the first week of life, and about 1 million newborns die within the first 24 hours. Preterm birth, intrapartum-related complications, infections and birth defects cause most neonatal deaths. Promoting newborn survival requires building strong health services, ensuring that every birth is attended by skilled personnel and making hospital care available for emergencies. It is crucial that essential newborn care is provided, including immediate and prolonged skin-to-skin contact and early and exclusive breastfeeding, to improve survival chances and lay the foundations for a healthy life.

OBJECTIVES OF CONFERENCE

At the end of the State Level Conference, the participants will be able to

- Describe overview of early neonates.
- Demonstrate the practical skill in assessing the maturity of early neonates.
- Interpret the hemodynamic monitoring in neonates.
- Elaborate on early identification and detection of congenital abnormalities.
- Explain the common infections in newborns, their management and the nurse's role.
